

Canada sized the opportunity. It hasn't built the path to market.

Precision fermentation and cultivated food are a documented, multi-billion-dollar opportunity for Canada — and Ontario is named as the province best positioned to capture it. The regulatory and go-to-market path is still forming, which is exactly why founders who land now help shape it.

The Opportunity

- Canada needs a national vision and strategy for cellular agriculture in the near term — it does not yet have one in place.
- The regulatory framework for cellular agriculture products is still evolving toward clarity and transparency.
- Research and commercial development need additional supporting mechanisms beyond the foundation already built.

Steps Canada still needs to capture this opportunity: strategy, regulation, R&D support

What You Get, Landing With Us

- ✓ **Real access, not a lead list**
Pre-briefed introductions to qualified buyers, partners, and ecosystem organizations in agtech-relevant regions like Hamilton-Niagara.
- ✓ **Market validation before you commit**
Test demand, refine positioning, and identify revenue opportunities before you scale up spend in a new market.
- ✓ **A Canadian legal and financial foundation**
Warm introductions to incorporation and immigration lawyers and accounting partners so your entity is set up right the first time.
- ✓ **A funding map, not a cold search**
Guidance on the grants, programs, and investor pathways relevant to agri-food and agtech in Ontario and Canada.

Programs for every stage of the market entry

LOCAL | INTER-PROVINCIAL | INTERNATIONAL

From free regional bootcamps to structured multi-month market entry and soft landing programs. Find the program that matches where your company is today.
